

MODULE 5: STRUCTURED DATA FOR DOCS

Use Python scripts to read write, and validate structured data formats like JSON and YAML.

Create a New Python File

1. In VS Code, click File > Open Folder, and create/select a folder like python-course
2. In the Explorer tab (left sidebar), click New File and name it: **data_checker.py**

Practice the following automations

Type the following text into the terminal and observe the automation.

AUTOMATION	CODE
Read a JSON file	<pre>import json with open("config.json") as f: config = json.load(f) print(config["project_name"])</pre>
Write a JSON file	<pre>data = {"title": "API Guide", "version": "1.2"} with open("output.json", "w") as f: json.dump(data, f, indent=2)</pre>
(Optional) Read YAML	<pre>pip install pyyaml required = ["title", "version"] for key in required: if key not in data: print(f"Missing: {key}")</pre>
Validate keys in structured data	<pre>required = ["title", "version"] for key in required: if key not in data: print(f"Missing: {key}")</pre>
