

MODULE 5: WORKING WITH FILES AND TEXT

Practice using Python scripts to read and write files like .txt and .md.

Create a New Python File

1. In VS Code, click File > Open Folder, and create/select a folder like python-course
2. In the Explorer tab (left sidebar), click New File and name it: **file_editor.py**

Practice the following automations

Type the following text into the terminal and observe the automation.

AUTOMATION	CODE
Read a Markdown file	<pre>with open("example.md", "r", encoding="utf-8") as f: content = f.read() print(content)</pre>
Write to a new file	<pre>with open("summary.md", "w", encoding="utf-8") as f: f.write("# Documentation Summary\n\nWritten with Python!")</pre>
Search and replace in file content	<pre>content = content.replace("outdated_term", "updated_term")</pre>
Loop through multiple files	<pre>import os for filename in os.listdir("docs"): if filename.endswith(".md"): print("Found file:", filename)</pre>
